

MACFormatter: Hardware address format converter

Matthew Dittmer

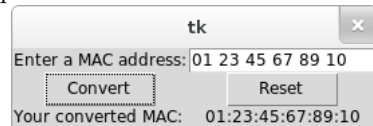

April 30, 2013

Introduction

The purpose of this application is to convert hardware addresses to colon delimited octets. Hardware addresses, or MAC(Media Access Control) addresses, are expressed in a variety of forms. These forms include two octets delimited by colons, dashes, periods, and no delimiters at all. There are many use for one form in particular. Two octets separated by colons are expected input for a variety of systems including wireless logs and access control lists.

Usage

The usage of this application is simple. One can paste or type the hardware address in the the entry box and click "convert". The converted address will appear at the bottom of the window.

In addition to being show at the bottom of the window in colon delimited form, the application will automatically copy the result to the clipboard to paste for use in another system.

Support
